

I have an open Phd position at the School of Computer Science and Engineering, NTU Singapore, under the following scholarship scheme: <http://admissions.ntu.edu.sg/graduate/scholarships/Pages/ResearchScholarship.aspx> The student will need to start the Phd program from this August, and thus needs to be available to join in said time frame.

My areas of interests are decentralized systems, cyber security and data/graph analytics. There are several possible specific topics that I have in mind, and I am also open to accommodating the prospective student's interests as long as they fit my own overall skill sets and interests. One particular direction I am keen on exploring is the application of data science for cyber risk assessment and risk transfer (e.g., cyber insurance). Having said that, preference will be given to the strongest candidates, and the topic will be finalized based on the candidate's interests and strengths.

The decision needs to be finalized by first week of May 2019, so please contact me at anwitaman@ntu.edu.sg before end of April 2019.
