Doctoral Consortium

Joint JCDL/ICADL International Digital Libraries Conference 2010
Surfers Paradise, Gold Coast, Australia, June 21, 2010
Proceedings
Preface

Welcome to the Joint JCDL/ICADL 2010 Doctoral Consortium! This event brings together Ph.D. students from around the world---Portugal, Germany, Singapore, India, Australia and New Zealand are represented---and an equally international Advisory Panel---from Australia, Canada, the US, Portugal, Norway, the UK, Singapore and New Zealand. The goal of the Doctoral Consortium is to create a forum for informal discussion of dissertation research projects, in order to provide feedback and general advice in a constructive and international atmosphere. It offers an opportunity for students to present their dissertation research when it is at a point at which they can benefit from an open discussion by their peers and by researchers in the field of digital libraries. For all of us, it is an opportunity to learn about ongoing research and to discuss, not the finished product, but the work in progress and how it might further develop.

The students participating in the Consortium were selected by a Program Committee. Each of the papers submitted was subjected to three reviews and those to be presented were selected on the basis of their research potential and their potential benefit from discussion at the Doctoral Consortium. Each presenter has 20 minutes to present the research, focusing on the main theme of the dissertation, what has been achieved so far and how he/she plans to continue the work. Another 10 minutes is reserved for discussion and feedback from the Advisory Panel, doctoral students, and other participants.

The Doctoral Consortium is jointly sponsored by the School of Library, Archival and Information Studies, University of British Columbia, Canada and the Wee Kim Wee School of Communication and Information, Nanyang Technological University, Singapore. Financial support for the presenters’ travel from the National Science Foundation and ACM SIGIR is gratefully acknowledged.

# Table of Contents

A contextual model for developing digital library education for Vietnamese library and information management professionals ........................................ 1  
*Hung Do, Daniel Dorner, Gary E. Gorman*

Multi-document summarization of information science research papers .................. 12  
*Kokil Jaidka*

A topic modeling approach to social tag prediction ........................................... 19  
*Meiqun Hu, Ee-Peng Lim, Jing Jiang*

Semantic interoperability in Europeana .......................................................... 26  
*Marlies Olensky*

Modelling argumentation structures in scientific discourse through context identification: Towards intelligent libraries ............................................. 33  
*Angrosh M.A., Stephen Cranefield, Nigel Stanger*

Retrieving data from mind maps to enhance search applications ......................... 41  
*Jörjan Beel*

A unified social network framework ............................................................... 46  
*Robert Meusel, Mathias Niepert, Heiner Stuckenschmidt*

Social network analysis of digital library academic community ......................... 53  
*Monica Sharma, Shalini R. Urs*

Achieving semantic interoperability using model descriptions ........................... 59  
*Hugo Manguinhas, José Borbinha*

Enhancing the quality and trust of citizen science data ...................................... 65  
*Abdulmonem Alabri*

Semantic annotation of 3D digital representation of cultural artefacts ................. 75  
*Chih-Hao Yu*
