*This project, dubbed the 'Light Hadron Collider' is an interactive LED-embedded display board used to supplement the CN Yang Scholars' Club's CERN exhibition titled 'When Worlds Collide'. The LEDs, arranged to outline the main features of the accelerator complex at CERN, hopes to allow viewers a better understanding of the step-by-step process of particle acceleration, from the LINAC (blue) to the Large Hadron Collider (LHC). Buttons are available to allow the viewer to witness particle collisions at two major experiments on the LHC, ATLAS and CMS. [Jul to Aug 2015]*
