eduroam for Windows 11 Clients

1

Preload the machine with this profile [here](#).

Execute the below command in the directory where the profile has been saved.

```
netsh wlan add profile filename="Wi-Fi-eduroam.xml"
```

C:\>netsh wlan add profile filename="Wi-Fi-eduroam.xml"
Profile eduroam is added on interface Wi-Fi.

2

When near a wireless access area, click on the network icon highlighted in red circle below.

Click on “Available” on the Wi-Fi icon.
Proceed to click on "eduroam" under the wireless SSID connection screen.

For connecting the first time, do not check “Connect automatically” and proceed to click “Connect”.

[Image of Wi-Fi settings showing options NTUCORPSTAFF, NTUSECURE, NTUGUEST, and eduroam, with eduroam selected and Connect automatically uncheckd.]
When prompted with the Wi-Fi certificate, click “Connect”.

Supply the username & password when prompt for login credentials. NTU users will use the format xxxx@yyyy.main.ntu.edu.sg where xxxx = username, yyyy = staff or student or assoc. For example, if a staff is having username abcd, the login format will be abcd@staff.main.ntu.edu.sg. Proceed to click “Connect”.

When successfully connected to "eduroam", the below display should be seen.

To remove the eduroam profile, click on "Network & Internet Settings", under "Wi-Fi", click on "Manage known networks".
Click on "eduroam" and "Forget", repeat step 1 to 3 to re-enter any changes to the profile settings.
