

Cyber Forensics Evidence Tracking Platform

Data Bank DB

In response to the problem of mishandling digital evidence, this platform allow forensics analyst to securely store and organize the digital evidence instead of the traditional manual handling. This platform also allows the forensics analysts to perform search efficiently and keep track of the files movement.

Security

Integrity: Hash Checker using SHA-256 to check for discrepancy of files.

Authenticity: Using only registered account with credentials will be able to access the platform.

Confidentiality: Proper access control and file/case permission control to restrict unauthorized user to access of files or case.
