

Travel Vaccination Mapping

for safe and fuss free travel in the future

Student: Goh Chun Yi

Supervisor: Dr Owen Noel Newton Fernando

Project Objectives:

This project aims to create a 'one-stop' Travel Vaccination Mapping (VacMAP) application that provides the information of the additional vaccinations recommended to be taken by the travellers before their travel, based on their existing vaccination records. With an initial effort taken by the travellers to input their existing vaccination records, the end goal of VacMAP is to give the travellers a peace of mind that they have already fulfilled the travel requirement for vaccinations.

Main Important Functions

1. Access to own vaccination records (after initial input)
2. Recommended additional vaccines for country based on existing records
