

# Metaverse Real Estate VR

## Real Estate VR platform

Student: Delon Lim Long Ting

Supervisor: Prof Dusit Niyato

### Project Objectives:

This project aims to implement a VR platform in that users will be able to view the properties virtually without being restrained by geographical boundaries. Unlike viewing images on a web platform, they can immerse themselves in the VR experience.

As property viewing is a time-consuming trial-and-error process for potential buyers and sellers, this platform can be used to mitigate the drawback. Without needing to make an appointment with any middleman, users can view the property in VR anytime whenever they are free.

Lastly, users can customise properties to suit user's lifestyle needs.
