

Decentralised Insurance Platform

A safety net for Defi ecosystem empowered by Smart Contracts

Student: Lin Ruixiang

Supervisor: Assoc Prof Wee Keong Ng

Project Objectives:

The project examines the problem in a traditional insurance system and highlights the shortcomings of current decentralised insurance solutions. It introduces 'Insurex', a decentralised insurance platform built on Ethereum blockchain that aims to address some of the limitations. Insurex offers a variety of indexed insurance policies and provide immediate pay-out upon verification. Additionally, a user friendly interface is designed to provides an improved user experience.

Project Features:

- Offer variety of policies including protection for market crashes and agriculture insurance from weather.
- Search and filter policies.
- Policy purchase and claim history.
- Immediate policy pay-out upon verification
