

TGIF

THE NTU LINGUIST CHATROOM

Teaching through Tagging

In this Talk, I present an ongoing effort to enrich students' learning by involving them in sense tagging. The main goal is to lead students to discover how we can represent meaning and where the limits of our current theories lie. A subsidiary goal is to create sense tagged *corpora* and an accompanying linked lexicon (in our case, Wordnets). We present the results of tagging several texts and suggest some ways in which the tagging process could be improved. I will also present feedback and discussion from students who have taken the classes. Overall, students reported that they found the tagging an enriching experience. The annotated *corpora* and changes to the Wordnet are made available through the *NTU Multilingual Corpus* and associated Wordnets (NTU-MC).

WEBINAR ●

12 March 2021
1:30pm - 2:30pm
Held on Zoom

REGISTRATION ●
