The demand for capacity remains strong as container lines continue to collaborate closely with P&O, Maersk, and the Maritime Deckers. The current scenario has brought new life to the transshipment market, as well as incorporating a new generation of IDAs, and the transformation of existing buildings.

The current scenario has brought new life to the transshipment market, as well as incorporating a new generation of IDAs, and the transformation of existing buildings.

The increased demand on container handling in Singapore can be attributed to several factors. First, Singapore remains a key transshipment hub, attracting much-needed vessels to the port. Second, the rapid growth of e-commerce and the need for efficient logistics solutions have resulted in increased demand. Additionally, the government has implemented several initiatives, such as the Green Shipping Corridor, to enhance sustainability and reduce carbon emissions. These factors, combined with the strong demand for logistics services, have contributed to the growth in the container handlings market in Singapore.
