Pediatric Bio-Ethics: Is there a balance?

In this episode, we were joined by Professor Dominic Wilkinson, a bioethicist and Professor of Medical Ethics at the University of Oxford, where he is also the Director of Medical Ethics and Deputy Director at the Uehiro Centre for Practical Ethics. He shared the relevance of ethics in the field of medicine and highlighted the growing need for guidelines and standard practices to be put in place with the advancement of technology and its application in the medical field. Speaking on Pediatric care, he stressed how this most vulnerable segment of the population, are most to be protected and cared for in their best interest and not of the caretaker.

Urban Science Workshop Series
26 September – 6 October 2023

Cities need to develop long-term strategies, yet city managers need to be able to run a city on a day-to-day basis, without ossifying status-quo solutions into legacy systems. The ability to set viable transition pathways from the now to a desired state in the future, as well as bring everyone along, is key. How then, can city leaders go about solving complex problems, without doing everything, everywhere, all at once?
