

# Student internship

- About you
  - You are keen to understand more about the lives of children
  - Perhaps you heard an infant's first words, and wondered how gibbering 'ga-ga' becomes 'papa'. Or, you saw toddlers at the playground, and wondered if they will ever be able to play together without making a ruckus! You may have helped a pre-schooler do math, and noticed he or she was amazingly quick, perhaps quicker than you were at that age!
- What are some things interns may be asked to do :
  - Think and discuss the content of what other scientists have found on child development (e.g. scholarly journals, books)
  - Critically consider scientific findings and write about them in a way relevant to the aims of the research project
  - Communicate with other team members to contribute to the smooth completion of a research goal
  - Assist in making sense of the collected data, with an emphasis on doing so using numbers and words
  - Work directly with participants of the research project
  - Reflect on their learning journey as an intern here at CRCD
- Please contact the CRCD researcher you are interested in working with the following information\*
  - Your current course of study
  - Proposed period of internship
  - Desired remuneration
  - CV

*\*Applications take 3 months to process so send them in early to avoid disappointment!*
