NBS-PRI-ECGI Public Lecture Series on Sustainable Business: Blended Finance - Scaling Sustainable Investing in Emerging and Developing Economies

Mobilising private capital at scale is critical to financing sustainable development, particularly in emerging and developing economies (EMDEs), where it is needed most. This lecture explores the barriers and opportunities to scaling sustainable investment, including the role of risk perceptions and market frictions. It then looks at how blended finance can be designed to deploy catalytic capital more effectively and crowd in private investment.

The Social Architecture of Climate Policy: Climate Resilience and Cultural Memory in Singapore's Built Environment

What is the social and cultural cost of greening Singapore's built environment? Join the lecture as part of the Climate Transformation: Sustainable Societies Lecture Series on 24 November 2026, from 6:30–8:30pm at NTU Centre for Contemporary Art Singapore, Gillman Barracks. Dr **Benjamin Low** (SUTD; CTP), **Ronald C.T. Lim** (Docomomo Singapore), **Jihane El Alami** (GreenA Consultants) and **Daniel Wong** (SUTD) will explore industry participation, modern architectural heritage, retrofitting existing buildings and AI-enabled analytics. The lecture will be moderated by Prof Thomas Schroepfer (SUTD; Singapore-ETH Centre).

RESEARCH

AgriS and NTU deepen partnership to develop joint lab for Resilient Bioinnovation

NTU Singapore and Global Mind Agriculture (GMA), an AgriS member company in Singapore, are deepening their research and innovation partnership through the proposed establishment of the AgriS-NTU Joint Lab for Resilient Bioinnovation in Singapore, to be anchored at the Future Ready Food Safety Hub (FRESH@NTU). The proposed AgriS - NTU Joint Lab will bring together AgriS' agricultural capabilities and NTU's scientific expertise across three themes: climate-resilient agriculture, agriculture-derived bioactive ingredients, and circular bioeconomy innovation.

“Artificial leaf” generates clean hydrogen from contaminated seawater

NTU Singapore scientists have developed a leaf-inspired device that harnesses sunlight to produce clean hydrogen from seawater and simultaneously degrade hydrazine, a highly toxic contaminant from industrial wastewater. Published in *Nature Communications*, the device converts sunlight into electricity to drive the reaction without the need for external power sources. The researchers are now working to expand the device’s applications to treat other pollutants as well as convert waste materials into fuels and industrial chemicals.

New national fellowship backs five Singapore start-ups for global growth

Eight technologists building five Singapore-based deep-tech start-ups in areas such as carbon capture, green methanol and food preservation, have been selected for the inaugural cohort of Activate Global Fellows – Singapore. Hosted by NTU Singapore, the national fellowship aims to help promising science and technology ventures grow into globally competitive companies. With S$12 million in funding from the National Research Foundation Singapore, the programme will support 20 Singapore-based companies over three years and help take homegrown deep-tech innovations from the lab to global markets.

Study calls for stronger fuel certification to advance green shipping

NTU Singapore and environmental non-profit Pacific Environment have issued a new study highlighting that strict and reliable fuel certification is essential to keep the global shipping industry's transition to clean fuels honest and fraud-free. The study titled “*The role of sustainable fuels certification schemes in maritime decarbonisation*”, was led by the Maritime Energy & Sustainable Development Centre of Excellence (MESD) at NTU Singapore.
