

Indonesia's Director General of Science & Technology Visits RGE-NTU SusTex

RGE-NTU SusTex was honoured to host **Prof. Dr. Ahmad Najib Burhani**, Director General of Science & Technology from the Indonesian Ministry of Higher Education, Science, and Technology, for an official visit to our facilities.

During the visit, the Director General toured the SusTex gallery alongside **Professor Dalton Tay** (Centre Director, RGE-NTU SusTex) and **Professor Lydia Wong** (Executive Director of INSPIRASI). The group, which included SusTex Research Lead **Dr. Poernomo Gunawan** and colleagues from INSPIRASI, engaged in a sharing of the current textile sustainability landscape in Singapore.

The visit served as a valuable platform to demonstrate how SusTex bridges the gap between academic research and industry application. By showcasing our latest innovations, we aim to further the dialogue on sustainable development and collaborative research within Southeast Asia.

We are grateful to the Director General for his time and for the opportunity to share our commitment to textile circularity and innovation.
